UNIT OF T

AFTER 8 YEARS OF BATTLING BREAST CANCER, ELLEN FAUBUS KRETH HAS BEEN DEDICATED TO HELPING BATTLE THE DISEASE.

AT AGE 48, Rev. Michael Williams was a prime target for cancer, and he wasn't even fully aware of it. An African-American and edging closer to 50, Williams had seen his mother and father pass away from breast and lung cancers, respectively. His family history is rich with various types of the disease. "In retrospect, I should have seen it coming,"

said Williams, pastor at the Family Time Baptist Church in Pine Bluff. Subconsciously, perhaps he did.

Another pastor at the church one day urged Williams to go with him to a Pine Bluff clinic offering free colorectal cancer screenings. Sure enough, precancerous polyps were found in Williams and successfully removed.

"If I hadn't gone, I'd be having some serious problems today," Williams said. "I can't spread the word fast enough. Screenings save people a lot of trouble down the road, and everyone needs to have easy access to them."

The pilot screening program that discovered Williams' polyps was part of the Colorectal Cancer Control and Research Program established by the Arkansas Colorectal Cancer Act of 2005. The program was a collaborative effort involving UAMS' Winthrop P. Rockefeller Cancer Institute and >

Fay W. Boozman College of Public Health, along with the Arkansas Department of Health. It was led by Ronda Henry-Tillman, M.D., and Paul Greene, Ph.D., both of UAMS.

Arkansas has one of the country's highest annual mortality rates from colorectal cancer with an average of just more than 20 deaths per 100,000. That's compared to the national average of 17 deaths per 100,000. Nearly 1,700 Arkansans are diagnosed with colon and rectum cancers each year.

Fortunately, patients whose tumors are detected at an early stage before the disease spreads have an 80 percent to 90 percent chance of surviving for 10 years or more. Colorectal cancer is one of the few diseases that can be prevented through regular screening,

The most disheartening thing is when you have the knowledge and know-how to make a difference and you don't do anything about it."

by allowing polyps to be removed before they become cancerous Breaking down the barriers that placed Arkansas 47th in the nation in the number

of cancer screenings was a primary focus of the Colorectal Cancer Act. The legislation mandated coverage for colorectal cancer screening by defined health care plans and created a pilot program to help uninsured and under-insured Arkansans obtain screening.

"That was a groundbreaking time in Arkansas and actually considered to be a very Henry-Tillman, principal investigator of the Colorectal Cancer Education and Screening Program at UAMS. "The most disheartening thing is when you have the knowledge and know-how to make a difference and you don't do anything about it." Henry-Tillman also is medical director of the Women's Oncology Clinic at UAMS.

Changing Lives

The pilot screening program provided education and training for primary care physicians and no-cost screening for patients who met program guidelines and had no insurance.

From September 2006 to September 2008, 700 patients were referred to the program. Of those 700, 679 were eligible, 553 were screened and 507 received colonoscopies. Polyps were found in 176 patients, precancerous polyps were found in 96 and six cancers were diagnosed.

"What we found is that the state would indeed benefit from an effort to expand colorectal cancer screenings and education," said Glen Mays, Ph.D., chairman of the UAMS College of Public Health's Department of Health Policy and Management. "In this limited effort we reached a couple hundred patients with a life-saving and cost-effective intervention. Imagine the health and economic benefits of a comprehensive longterm screening program."

Williams said he eventually would have gotten screened had his colleague not urged him, but it probably would have been too late.

"This program and the efforts of the leaders at UAMS saved me from what probably would've ended up being a more troubling outcome," he said. "We need to keep these efforts going and keep changing the lives of those who take advantage of it."

And the Survey Says ...

The 2005 legislation provided resources for statewide research into the demographic Arkansas. It also included an arectal concerning services that are available to support a permanent statewide screening program.

Researchers found that although colorectal cancer screening rates in Arkansas were

Volunteers and Patients "Spit For the Cure"

CCC volunteer, Katy Baka receives instructions from UAMS oject coordinator Shana Fetters to collect saliva and data for a east cancer research program conducted by the Fay W. Boozman ollege of Public Heath and Winthrop P. Rockefeller Cancer Instie at UAMS. Genetic profiles combined with environmental posures are being studied to determine an individual's risk of veloping breast cancer. Shana will return to the CCCC at the ec. 14 clinic and all women of the community are invited to me by and "Spit for the Cure" . This "bank" of information will an invaluable source of information for future research. If you ve a women's' group or Sunday School class that would like to rticipate, contact Shana Fetters at 501-296-1131.

SPIT FOR THE CURE IN THE NEWS... 2011

Health & Fitness? We've got a Doc for that!

Many people often ask, what is HMG? But a better question night be, who is HMG?

HMG physicians are people you know, names you've heard and include many physicians and practices with long records of service to Jonesboro and surrounding areas. As the region's largest physician group, our members represent a wide range of specialties and services—all conveniently located in clinics across Northeast Arkansas.

From obstetrics and family medicine to cardiology and neurosurgery, HMG doctors are committed to providing the highest quality healthcare while maintaining competitive rates and values. With more than 175 physicians, 35 specialties and 55 clinics, we are dedicated to providing healthcare for every stage of life's journey.

Affiliate Susan G. Komen for the Cure. The doors to the Convo will open

at 8 a.m., and as always, admission for the entire family is free of charge. With more than 200 vendor booths set up on the floor and mezzanine levels, the Expo will feature information on a wide array of local health and fitness services. Plus, HMG physicians will be at various booths and participating in special panel discussions over the two-day period.

Several returning favorites to this year's Expo include the Healthy Cooking Kitchen and the Fitness Zone, where participants can watch demonstrations on cooking and exercise techniques. You can also take advantage of all the free health screenings, including cholesterol, anemia, glucose, blood pressure and body mass index, just to name a few.

On Sunday, April 17, high school athletes from Brookland, Jonesboro, Nettleton, Ridgefield Christian, Valley View and Westside schools will be able to get their free sports physicals. The Expo is the only event of its kind in the entire country to provide extensive athletic physicals—including EKGs—free of charge to student athletes.

The new and improved Pink Zone, formerly the Women's Area, will feature health and fitness information just for the ladies. The St. Bernards Women's Mobile Unit will also be on site to conduct mammograms funded through a grant from the Arkansas Affiliate Susan G. Komen for the Cure. Uninsured women or age of 40, who have not been exam at least one year, should come see i qualify for a free mammogram.

Also bigger and better this yea Kids Zone—where kids of all ages climb on the Army National Guard climbing wall, knock down some p with the Jonesboro Bowling Center take part in the NFL Play 60.

There's something for everyon so mark your calendar and join us of April 16 and 17 for the best ever H Health & Fitness Expo!
